

TE WHARE TŪROA AUT REGENERATIVE ENVIRONMENTS RESEARCH NETWORK

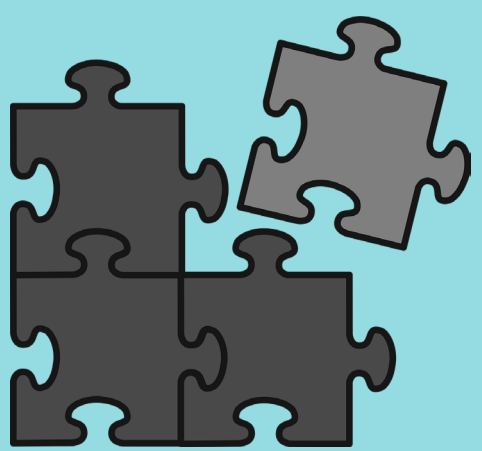

Supporting the regeneration of natural and built environments

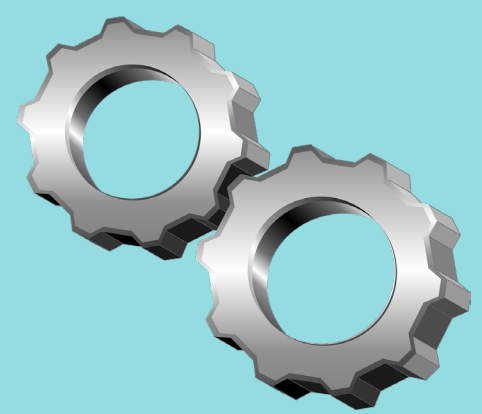

Our Mission

Catalyse
regeneration

Connect disciplines,
kaitiaki and amplify
youth voices

Operationalise
knowledge to increase
impact

Our Mahi

Our innovative research explores **ecological, food, urban, architectural and wider regenerative systems change**, integrating mātauranga and other regenerative knowledge systems and practices.

We're also looking into socio-ecological data provisioning, measuring, monitoring and communicating, all to support the thriving of te taiao, the living world.

So far we have two main platforms that host our projects, with more to be launched as our network grows:

- AUT Living Laboratories

An experimental restoration project investigating effective re-forestation methodologies.

- ORA Regenerative Action Lab

A regenerative design research lab. We focus on ecologising and connecting our cities and communities to enhance resilience and mauri ora (social and ecological wellbeing).

Do you think we could help with your project?
